***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-22, drawn to a method for applying a hybrid coating to a substrate.

Group II, claim 23, drawn to a hybrid coating.

Group III, claim 24, drawn to a product comprising a hybrid coating.

Group IV, claims 25-31, drawn to a device for applying a hybrid coating to a substrate.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons: the special technical feature common to all the independent claims is a combination of precursors for inorganic and an organic component that may be activated in a plasma source for plasma activated deposition of a hybrid coating as claimed by claim 1, which is shown to be anticipated by US 5522343 to Kodama et al (See column 3, lines 1-15 and Example 3). For these reasons the unity does not exist between the groups of claims.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
